No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

SOURCE INFORMATION:

The RPCI-11 human BAC library was made from the blood of one male donor, as described by Oscogawa, K., Woon, P. Y., Zhao, B., Frengen, B., Tateno, M., Catanes, J. J. and de Jong, P. J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 5::1-8. The clone may be obtained either from libraries Genetics 1:1-8. The clone may be obtained either from and coworkers at the Roswell Park Cancer Institute

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               VECTOR: PBACE3.6
NEIGHBORING SEQUENCE INFORMATION:
NEIGHBORING SEQUENCE INFORMATION:
The clone sequenced to the right is AC022076. Actual start of this clone is at base position 1 of RP11-780J6; actual end is at base position 1 sequence of RP11-780J6.
Location/Qualifiers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      MAPPING INFORMATION:
Mapping information for this clone was provided by Dr. John D.
McPherson, Department of Genetics, Washington University, St. Louis
MCPherson, Department of Genetics, the map position of this
sequence, see http://genome.wustl.edu/gsc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               63108, USA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 0); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by
                                                          Louis,
                                                                                                                                                                                                                                                                                  Department of Genetics, Washington

It currently consists of 10 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

Contert project Information
Center project name: KEHN
Center clone name: CH1310-188E12
Center clone name: CH230-188E12
Center clone name: CH230-188E12
Center clone name: Harsities
Sequencing vector: plasmid;
Commary Statistics
Sequencing vector: plasmid;
Assembly program: Phrapy version 0.990329
Consensus quality: 200661 bases at least Q40
Consensus quality: 200661 bases at least Q20
Consensus quality: 200661 bases at least Q20
Consensus quality: 200862 bases at least Q20

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bom.tmc.edu/docs/Genbank_draft_data.html).

NOTE: This is a 'working draft' sequence. It currently consists of 62 contigs. The true order of the pieces consists of 62 contigs. The true order of the pieces arbitrary. Gaps between the contigs are represented as arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                          Submitted (18-MAR-2003) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor plaza, Houston, TX 77030, USA On Mar 18, 2003 this sequence version replaced gi:28975751.
                                                                                                                  Submitted (17-MAR-2003) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor plaza, Houston, TX 77030, USA (bases 1 to 214038)

The present invention relates to novel human phospholipase-like enzymes and polynucleotides encoding such proteins. Sequences of the invention are useful for producing a medicament for modulating the activity of phospholipase in a disease such as cancer, inflammation, cardiovascular disorders, chronic obstructive pulmonary diseases, central nervous system (CNS) disoracers such as brain injuries, cerebrovascular disease, dementia (Alzheimer's disease, Parkinson's disease, corticobasal degeneration, motor neuron disease, Pick's disease, Huntington's disease, Creutzfeld Jacob dementia, schizophrenia with dementia, korsakoff's psychosis, pain associated with CNS (e.g. epilepsy, failed back surgery syndrome, sciatica), multiple sclerosis, stroke, age associated memory impairment, allergic disease including asthma, allergic rhinitis (hay fever), atopic dermatitis, anaphylaxis and inflammation, cardiovascular disease, coronic obstructive pulmonary disease, acute respiratory distress syndrome, gout,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New human phospholipase-like enzyme polypeptide useful for screening agents, and in the treatment of cancer, inflammation, diabetes, obesity, a central nervous system disorder, or a cardiovascular disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Disclosure; Fig 6; 144pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention provides the protein and coding sequences of a number of human reproductive system related antigens. These can be used in the prevention and treatment of reproductive system disorders, including cancer. The present sequence is a coding sequence of the

                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention provides the protein and coding sequences of 973 human testicular antigens, and fragments of their genomic sequences. The sequences can be used in the treatment of cardiovascular, urinary system, reproductive system, immune, respiratory, neurological and gastrointestinal disorders, infections, and particularly cancer, especially testicular cancers. The present sequence is a cDNA of the

Sequences ABB10981-ABB12330 represent 1350 novel human polypeptides, and sequences ABA08225-ABA09574 represent nucleic acids encoding them. The invention also relates to vectors and recombinant host calls comprising a cultivation also relates to vectors and recombinant host calls comprising a conclectide of the invention, methods of producing the nucleotides or polypeptides in a sample, and methods of identifying compounds which compared to polypeptides of the invention. Although novel, many of the polypeptides of the invention have homology to known proteins, thereby giving an insight into their probable biological activities, and hence potential therapeutic applications. The polypeptides of the invention may have various activities, including cytokine, cell proliferation or cell differentiation activities, sem cell growth factor activity; is memberedic or chemokinetic activity; tissue growth activity; and the invention are useful cativity; activin- or inhibin-related activities, chemokinetic or chemokinetic activities, haematopolytic activities, considered activities, chemokolytic activities, considered activities, considered activities, conditions or metastasis.

Conditions, e.g., by protein or gene therapy. Such conditions include cancers, haematopoletic disorders (e.g., metaling or lapinand and phornand conditions, e.g., by protein or gene therapy. Such conditions included arterial ischaemia, bone disorders (e.g., metaling or lapinand and protein or gene therapy. Such conditions and conditions, e.g., by protein or gene therapy. Such conditions are useful growth. Polypeptides involved with tissue regeneration and repair (or nucleic acids encoding them) may be used to promoce wound repair (or nucleic acids encoding them) may be used in che conditions of the aling (e.g., of burns, incisions and ulcers), while those with any place of promoce call growth. For example, such polypeptides may be used in cell cultures to promoce cell growth. For example, such polypeptides may be used in the incast of a such and a c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  nan proteins and DNA encoding sequences useful for preventing, treating ameliorating a medical condition in a mammalian subject e.g. arthritis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             that can be used to augment or replace cells damaged by illness, autoimmune disease or accidental damage. The polypeptides and nucleotides may also be used in the diagnosis of the above conditions, and in drug screening techniques. The present sequence represents a cDNA encoding a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence encodes a human phospholipase protein (I) located on Chromosome 2. (I) can be used for identifying agents that modulate its chromosome 2. (I) can be used for identifying agents that modulate its coffunction or activity where the agent is useful for treating a disease or condition mediated by a the human phospholipase protein. (I) peptides can be used in substantial and specific assays related to functional cofficient of the peptide sequences, to raise antibodies or to elicit information of the peptide sequences, to raise antibodies or to elicit corresponding protein is assays that determine the levels of protein in biological fluids, and as markers for tissues where the corresponding protein is expressed. Nucleotide sequences encoding (I) can corresponding protein is expressed. Nucleotide sequences encoding (I) can corresponding protein. (I) and chemical intermediates in biological portions of the protein. (I) and nucleic acid molecules encoding it can be used in the identification of therapeutic and may serve as modulate phospholipase activity in cells and tissues that express the modulate phospholipase activity in cells and tissues that express the protein as in kidney, blood, lung, brain glioblastomas,

The present invention relates to novel human phospholipase-like enzymes and polynucleotides encoding such proteins. Sequences of the invention are useful for producing a medicament for modulating the activity of phospholipase in a disease such as cancer, inflammation, cardiovascular choospholipase in a disease such as cancer, inflammation, cardiovascular diseases, chronic obstructive pulmonary diseases, central nervous system (CNS) disorders such as brain influries, cerebrovascular disease, dementia (Alzheimer's disease,) Parkinson's disease, corticobasal degeneration, motor neuron disease, Pick's disease, Huntington's disease, Creutzfeld acobamentia, schizophrenia with dementia, Korsakoff's psychosis, pain associated with CNS (e.g. epilepsy, failed back surgery syndrome, callergic disease including asthma, allergic rhinitis (hay fever), atopic dermatitis, anaphylaxis and inflammation, cardiovascular disease, chronic obstructive pulmonary disease, acute respiratory distress syndrome, gout, cartery disease, hyperlipidaemia, gall bladder disease, osteoarthritis, artery disease, hyperlipidaemia, gall bladder disease, osteoarthritis, colon cancer), thrombolytic disease, reduced fertility, polycystic colon cancer), thrombolytic disease, reduced fertility, polycystic colon cancer), thrombolytic disease, reduced fertility, menstrual irregularity, human and human and depression. The present sequence is

NOVX polypeptides and polynucleotides, useful for preventing or treating a disorder associated with aberrant NOVX expression or activity e.g., cancer, hypertension, atherosclerosis, cardiomyopathy or bronchial

Claim 13; Page 167-168; 1103pp; English.

asthma

This invention describes novel human NOVX polypeptides which have cytostatic, cardiant, antiarteriosclerotic, antiasthmatic and hypotensive

```
The invention relates to 566 new isolated human polypeptides and their encoding genes, sequences that are at least 95% identical to these or sequences comprising one or more conservative substitutions in these. The sequences comprising one or more conservative substitutions in these. The polypeptide, polynucleotide and antibodies against the polypeptides are useful in diagnosing, treating or preventing NOVX associated disorders, e.g. cardiomyopathy, atherosclerosis, hypertension, cancer, obesity, diabetes, AIDS, multiple sclerosis, graft-versus-host disease, hatheimer's disease, asthma, or fertility disorders. Alzheimer's disease, asthma, or fertility disorders. The nucleic acids are further used as hybridization probes, in chromosome mapping, tissue typing, preventive medicine, and pharmacogenomics. The polypeptides are also useful as vaccines. This sequence represents an example of the nucleic acid sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New NOVX polypeptides and nucleic acid molecules useful for preventing or treating NOVX-associated disorders, e.g. cancer, cardiomyopathy, atherosclerosis or diabetes, in chromosome mapping, tissue typing or in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim 20; SEQ ID NO 979; 1503pp; English.

activity. Pharmaceutical compositions comprising the NOVX proteins or nucleic acid molecules or NOVX antibodies are useful for preventing or treating a disorder associated with aberrant NOVX expression or activity e.g. cancer, hypertension, atheroscierosis, cardiomyopathy or bronchial asthma. The products of the invention can be used for gene therapy or in a vaccine. ABX97008-ABX97185 are cDNA fragments amplified and isolated by the PCR primers and probes represented in ABX13460-ABX1362 and ABX97186-ABX97185 encode the NOVX proteins described in
                                                                                                                                                                                                                               426

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ద
                                                                                           The invention relates to an isolated polypeptide (designated NOVX, or NOV127) comprising a sequence selected from 178 fully defined amino acid sequences (and their mature forms, variants and fragments). Also acid sequences (and their mature forms, variants and fragments). Also acid sequences (and their mature forms, variants and fragments). Also comprising the nucleic acid, a cell comprising the vector, methods for comprising the presence or amount of the polypeptide or the nucleic acid determining the presence of or amount of the polypeptide or the nucleic acid colecule in a sample, methods for determining the presence of or subject, a method for identifying an agent that binds to the above cuse in the treatment of a pathology that is related to aberrant or subject, a method for identifying a potential therapeutic agent for use in the treatment of a pathology that is related to aberrant or a pathology was not a modulation of activity or of latency or predisposition to acreening for a modulator of activity or of latency or predisposition to are useful for diagnosing, preventing or treating diseases such as are useful for diagnosing, preventing or treating diseases such as are useful for diagnosing, preventing or treating diseases or cachexia, cancer, neurodegenerative disorders like Alzheimer's disease or parkinson's disease, immune disorders, heamtopoletic disorders, concer-associated in chromosome mapping, tissue typing, preventive medicine and chromosome mapping, tissue typing, preventive medicine and chromosome mapping, tissue typing, preventive medicine and chromosome mapping, the polypeptides are also useful as vaccines. The polypeptides are also useful as vaccines. The

This invention relates to novel human enzymes (ENZM) and the genes which encode them. The invention may be useful for the development of compounds with a cytostatic, antiarteriosclerotic, anticonvulsant, nootropic, with a cytostatic, antiarteriosclerotic, antianlergic, antiantlergic, antiantlergic, antiantlergic, antiantlergic, antiantlergic, antiantlergic, antiantlergic, control of the may therefore be useful in disquesting, treating and preventing invention may therefore be useful in disquesting, treating and preventing conversation of ENZM, such as cell proliferative (for example cancer, overexpression of ENZM, such as cell proliferative (for example cancer, atherosclerosis), neurological (for example plyplepy, mutington's conversation of ENZM, such as cell proliferative (for example AIDS, allergies) and developmental (for example Hypothyroidism, Cushing's syndrome) disorders or infections. These are also useful in assessing the effects of conformation the expression of mucleic acid and amino acid sequences of ENZM. The present sequence is that of a gene which encodes a conformation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   367 TITICICITAGAATGAGCCCTTCCTGAGAACCCCTCGGAATAGTAACTACACGTACCCC 426
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; lipase; chromosome 2; phospholipase B homologue; thyroid; brain; inflammatory disease; proliferative disease; infectious disease: clotting disorder; cancer; drug screening; mental disorder; NHL; diagnostic reagent; clinical trial monitoring; cosmetic; nutriceutical; mutation detection; gene expression analysis; transgenic animal; nochropic; cytostatic; antinflammatory; single nucleotide polymorphism; SNP; gene therapy; gene; ss.
                                                                                                                                                                                                                                                                                                        New human enzymes (ENZM), useful for diagnosing, treating and preventing diseases or conditions associated with the aberrant ENZM expression e.g. cancer, AIDS, atherosclerosis, epilepsy, or infections.

The invention relates to a novel human lipase (NHL; ABB09555, ABB09556)
and to nucleic acids encoding it (ABQ77623, ABQ77624). The NHL has
construct al similarity with animal lipases, particularly phospholipase B.
Constructural similarity with animal lipases, particularly phospholipase B.
Construction with human thyroid and brain cDNAs. The NHL gene is
n conjunction with human thyroid and brain cDNAs. The NHL gene is
located on chromosome 2, and contains a C/T polymorphism at position 3953
of the open reading frame (ORF), resulting in an Ala/Val substitution at
constitution 1318 in the protein. NHL nucleotides and proteins are useful for
treating disorders such as inflammatory or proliferative disease,
infectious disease, clotting disorders, and cameer. They can also be used
in screening for compounds useful in the treatment of mental, biological
or medical disorders, as diagnostic reagents, in clinical trial
conflicting and in cosmetic and nutriceutical applications. NHL
conflictionally be used in the detection of disease.

associated mutations, in the analysis of gene expression, for the
therapy, and as part of ribozyme and/or triple helix sequences useful in
the modulation of NHL gene expression. The present sequence represents
conversed to the modulation of NHL sequence represents

```
The invention relates to a novel human lipase (NHL; ABB09555, ABB09556)

and to nucleic acids encoding it (ABQ77623, ABQ77624). The NHL has

Extructural similarity with animal lipases, particularly phospholipase B.

Computed sencoding NHL were obtained using human genomic sequences
in conjunction with human thyroid and brain cDNAs. The NHL gene is
confidention with human thyroid and brain cDNAs. The NHL gene is
confidention conjunction with human thyroid and brain cDNAs. The NHL gene is
confidential in the protein. NHL uncleotides and proteins are useful for
treating disorders such as inflammatory or proliferative disease,
confidential disorders, and cancer. They can also be used
infectious disease, clotting disorders, and cancer. They can also be used
in screening for compounds useful in the treatment of mental, biological
or medical disorders, as diagnostic reagents, in clinical trial
conficting and in cosmetic and nutriceutical applications. NHL
completides can additionally be used in the detection of disease.

Completides can additionally be used in the detection of disease.

Completides can additionally be used in the detection of disease.

Completides can additionally be used in the detection of disease.

Completides can additionally be used in the detection of the encoding the valuation of NHL gene expression. The present sequence represents

Completides can additionally wariant of NHL. Note: The present sequence is

Comblement to the modulation of the present sequence is

Comblement to the specification, but was derived from the the information of any and the present sequence is

The present invention relates to novel human lipid-associated molecules (LIPAM) and polynucleotides encoding such proteins. Sequences of the invention are useful for treating diseases or conditions associated with cereased expression of functional LIPAM. The antagonist is useful for treating a disease or condition associated with the overexpression of tunctional LIPAM. They are useful for diagnosing, treating or preventing cardiovascular disorders (e.g. arteriovanous fistula, arherosclerosis, cardiovascular disorders (e.g. arteriovanous fistula, arherosclerosis, cardiovascular disorders (e.g. peptic or rheumatic heart disease, aneuryms, varicose veins, congestive heart failure, thrombophlabitis, angina pectoris, ischaemic heart disease.

C esophagitis, anatea, peptic ulcer or Crohn's disease, disease, diabetes or inflammatory disorders (e.g. acquired immunodeficiency syndrome, cor inflammatory disorders (e.g. acquired immunodeficiency syndrome, cor inflammatory disorders (e.g. acquired immunodeficiency syndrome, cor creutzfeldt-asko disease), neurological disorders (e.g. stroke, anemia, asthma or Crohn's disease, or prion diseases such as kuru epilepsy, dementia, Alzheimer's disease, or prion diseases such as kuru epilepsy, dementia, myeloma or sarcoma). They are also used in gene therapy and protein replacement therapy. The present sequence is human corrected.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  2939 IGTCCCACTCAGAATGAGCCCTTCCTGAGAACCCCTCGGAATAGTAACTACACGTACCCC 2998

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Seq

US-09-949-016-15638/C

Sequence 15638, Application US/09949016

Patent No. 6812339

GENERAL INFORMATION:

APPLICANT: VANTER, J. Craig et al.

TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF

FILE REFREENCE: CLOOD1307

CURRENT APPLICATION NUMBER: 60/241,755

PRIOR PILING DATE: 2000-10-20

PRIOR PILING DATE: 2000-10-03

PRIOR PILING DATE: 2000-10-03

PRIOR FILING DATE: 2000-09-08

NUMBER OF SEQ ID NOS: 207012

SOFTWARE: FRANCE PRACES (or Windows Version 4.0)
